

Club Space

For continued work on our Project we need Premises and a address companies can turn to if they want to fund the robotics club. With that we also don't have any equipment sponsored yet. Therefor we need to stay in the Haus der Robotik for access to that. Currently there is space in the FSR7 Room that is highly underused and not taken care of. We could get to an agreement with them in that we take care of the place and they give us some of it for our Club. That would be a cost free space for us to work in and for others to turn to if they want to join. It makes room for at least 5-6 People working alongside each other. Also there is furniture in a room nearby which could be used for our purpose. That way we wouldn't have to spend anything for the start.

After elaborating together with Tobias Reich and Florens Gebhard we concluded that the following needs to be done:

- equipping the Mensa room with uniform inventory
- Build Up Inventory (3D Printer, and tools) in the [K_.00.017](#)
- cleaning and refurbishing the [K_.00.017](#) as closed Workspace
- talking to FSR7 for using the mensa room for an open office and contact address for company funding and incoming new members
